L6 ANSWER 1 OF 61 USPATFULL

AB A suppository composition and method for rectal administration of a lincosamide antibacterial drug, such as clindamycin, lincomycin, or pirlimycin, is disclosed. The composition is a rectal suppository containing an antimicrobially effective amount of the lincosamide in particulate form dispersed in a **Hard Fat** suppository base, preferably a **Hard Fat** NF suppository base. The most preferred suppository compositions of the present invention have long term storage stability, while maintaining effectiveness against bacterial infections.

CAS INDEXING IS AVAILABLE FOR THIS PATENT.

L6 ANSWER 2 OF 61 USPATFULL

AB A highly storage-stable composition for vaginal administration of clindamycin is disclosed which is useful for the treatment of bacterial vaginosis. The composition is a vaginal suppository containing an antimicrobially effective amount of clindamycin dispersed in a **Hard Fat** NF suppository base. **Hard Fat** NF suppository bases provide a clindamycin product having long term storage stability while providing efficacy against bacterial vaginosis which is equivalent to clindamycin vaginal creams.

CAS INDEXING IS AVAILABLE FOR THIS PATENT.

L6 ANSWER 4 OF 61 USPATFULL
AB There is provided a pharmaceutical composition suitable for rectal administration, the composition comprising at least one oxazolidinone antibacterial drug, for example linezolid, in a concentration effective for treatment and/or prophylaxis of a gram-positive bacterial infection, the at least one oxazolidinone being in particulate form having a particle size of about 0.5 .mu.m to about 150 .mu.m, dispersed in a carrier in which the oxazolidinone is poorly soluble. The composition is, for example, a suppository, an enema, a microenema or a rectal capsule.

CAS INDEXING IS AVAILABLE FOR THIS PATENT.

L6 ANSWER 5 OF 61 CAPLUS COPYRIGHT 2003 ACS

AB There is provided a pharmaceutical compn. suitable for rectal administration, the compn. comprising at least 1 oxazolidinone antibacterial drug, e.g., linezolid, in a concn. effective for treatment and/or prophylaxis of a gram-pos. bacterial infection, at least 1 oxazolidinone being in particulate form having a particle size of about 0.5-150 .mu.m, dispersed in a carrier in which the oxazolidinone is poorly sol. The compn. is, a suppository, an enema, a microenema or a rectal capsule. Suppositories contg. 2.9% linezolid by wt., in a particulate form dispersed in a lipophilic carrier, were prepd. by the following procedure. **Hard fat (Witepsol H-32 97.123 g)** was melted and mixed with 2.877 g linezolid which had been milled to a particle size of 14 .mu.m. The resulting linezolid **hard fat** mixt. was then homogenized at high speed. The homogenized mixt. of linezolid and molten **hard fat** was filled into suppository molds and allowed to cool at room temp. overnight. The resulting solidified suppositories were removed from the molds.

L6 ANSWER 13 OF 61 USPATFULL

AB Methods are provided relating to the enhanced cytoplasmic accumulation of amphipathic weakly basic or amphipathic cationic molecules in prokaryotes and eukaryotes under conditions of high extracellular pH. Furthermore, the methods relate to the unexpected synergistic effects of high extracellular pH and disrupted cellular efflux mechanisms on the cytoplasmic accumulation of amphipathic weakly basic or amphipathic cationic molecules in prokaryotes and eukaryotes. Methods are also provided for increasing the therapeutic potency of amphipathic weakly basic or amphipathic cationic compounds, e.g. antiseptics and disinfectants by using the antiseptic or disinfectant in the presence of a multiple drug resistance inhibitor such as reserpine. Finally, methods also relate to the exploitation of the aforementioned discoveries in the screening of small molecules, and libraries thereof, for biological activity in prokaryotes and eukaryotes. Also provided is a formulation comprising an amphipathic weak base, an amphipathic cation, or both, and a multiple drug resistance inhibitor wherein the pH of the formulation is 9.0. Furthermore, the combination of these ingredients have antiseptic and/or disinfectant effects.

CAS INDEXING IS AVAILABLE FOR THIS PATENT.

AB The present invention relates to novel lipopeptide compounds. The
 invention also relates to pharmaceutical compositions of these compounds
 and methods of using these compounds as antibacterial compounds. The
 invention also relates to methods of producing these novel lipopeptide
 compounds and intermediates used in producing these compounds.

AB The present invention provides solid pharmaceutical compositions for improved delivery of a wide variety of pharmaceutical active ingredients contained therein or separately administered. In one embodiment, the solid pharmaceutical composition includes a solid carrier, the solid carrier including a substrate and an encapsulation coat on the substrate. The encapsulation coat can include different combinations of pharmaceutical active ingredients, hydrophilic surfactant, lipophilic surfactants and triglycerides. In another embodiment, the solid pharmaceutical composition includes a solid carrier, the solid carrier being formed of different combinations of pharmaceutical active ingredients, hydrophilic surfactants, lipophilic surfactants and triglycerides. The compositions of the present invention can be used for improved delivery of hydrophilic or hydrophobic pharmaceutical active ingredients, such as drugs, nutrionals, cosmeceuticals and diagnostic agents.

L6 ANSWER 32 OF 61 USPATFULL

AB Use of fatty acid esters as bioadhesive substances. The fatty acid esters have molecular weights below about 1000 dalton and the fatty acid component of the fatty acid ester is a saturated or unsaturated fatty acid having a total number of carbon atoms of from C.sub.8 to C.sub.22. Particularly suitable fatty acid esters for use according to the invention are fatty acid esters which are selected from the group consisting of fatty acid esters of polyhydric alcohols, fatty acid esters of hydroxycarboxylic acids, fatty acid esters of monosaccharides, fatty acid esters of glycerylphosphate derivatives, fatty acid esters of glycerylsulfate derivative, and mixtures thereof. Excellent bioadhesive properties have been observed for fatty acid esters are glyceryl monooleate, glyceryl monolinoleate or glyceryl monolinolenate.

Methods are described for administering an active or protective substance to undamaged or damaged skin or mucosa of an animal such as a human by combining the active or protective substance with a bioadhesive fatty acid ester. The mucosa may be the oral, aural, nasal, lung, gastrointestinal, vaginal, or rectal mucosa. The administration may also be to body cavities such as the oral cavity, e.g. via buccal administration.

CAS INDEXING IS AVAILABLE FOR THIS PATENT.

AB The present invention employs a scavenging approach whereby overproduced nitric oxide is bound in vivo to a suitable nitric oxide scavenger. The resulting complex renders the nitric oxide harmless, and is eventually excreted in the urine of the host. Further in accordance with the present invention, there are provided compositions and formulations useful for carrying out the above-described methods. An exemplary nitric oxide scavenger contemplated for use in the practice of the present invention is a dithiocarbamate-ferrous iron complex. This complex binds to .NO, forming a stable, water-soluble dithiocarbamate-iron-NO complex having a characteristic three-line spectrum (indicative of a mononitrosyl-Fe complex) which can readily be detected at ambient temperatures by electron paramagnetic resonance (EPR) spectroscopy. The present invention relates to methods for reducing in vivo levels of .NO as a means of treating subjects afflicted with inflammatory and/or infectious disease. Dithiocarbamate-containing nitric oxide scavengers are administered to a host in need of such treatment; these scavengers interact with in vivo produced .NO, forming a stable dithiocarbamate-metal-NO complex. The NO-containing complex is then filtered through the kidneys, concentrated in the urine, and eventually excreted by the subject, thereby reducing in vivo .NO levels.

AB The present invention relates to a composition for increasing the vascular dwell-time of a particulate therapeutic or diagnostic agent in a mammal through the adjunct administration of an effective amount of the particulate therapeutic or diagnostic agent and an effective amount of a vascular dwell-time enhancing agent. Suitable therapeutic and diagnostic agents include those whose efficacy within the body is predicated on their ability to remain within or to be carried within the vascular compartment. Accordingly this method can be readily adapted for treating several diseases and disorders, including hypoxia, hypoxemia, anemia and cancer and for imaging selected regions of a mammal by

various imaging techniques, including ultrasound imaging, X-ray imaging and MRI imaging.

L9 ANSWER 1 OF 48 USPATFULL

AB A **suppository** composition and method for rectal administration
 of a lincosamide antibacterial drug, such as clindamycin, lincomycin, or
 pirlimycin, is disclosed. The composition is a rectal
suppository containing an antimicrobially effective amount of

the lincosamide in particulate form dispersed in a **Hard Fat suppository** base, preferably a **Hard Fat NF suppository** base. The most preferred **suppository** compositions of the present invention have long term storage stability, while maintaining effectiveness against bacterial infections.

CAS INDEXING IS AVAILABLE FOR THIS PATENT.

AB A highly storage-stable composition for vaginal administration of

clindamycin is disclosed which is useful for the treatment of bacterial vaginosis. The composition is a vaginal **suppository** containing an antimicrobially effective amount of clindamycin dispersed in a **Hard Fat NF suppository** base. **Hard Fat NF suppository** bases provide a clindamycin product having long term storage stability while providing efficacy against bacterial vaginosis which is equivalent to clindamycin vaginal creams.

L9 ANSWER 4 OF 48 USPATFULL

AB There is provided a pharmaceutical composition suitable for rectal administration, the composition comprising at least one oxazolidinone antibacterial drug, for example linezolid, in a concentration effective for treatment and/or prophylaxis of a gram-positive bacterial infection, the at least one oxazolidinone being in particulate form having a particle size of about 0.5 .mu.m to about 150 .mu.m, dispersed in a carrier in which the oxazolidinone is poorly soluble. The composition is, for example, a **suppository**, an enema, a microenema or a rectal capsule.

L9 ANSWER 6 OF 48 CAPLUS COPYRIGHT 2003 ACS
 AB There is provided a pharmaceutical compn. suitable for rectal administration, the compn. comprising at least 1 oxazolidinone antibacterial drug, e.g., linezolid, in a concn. effective for treatment and/or prophylaxis of a gram-pos. bacterial infection, at least 1 oxazolidinone being in particulate form having a particle size of about 0.5-150 .mu.m, dispersed in a carrier in which the oxazolidinone is poorly sol. The compn. is, a **suppository**, an enema, a microenema or a rectal capsule. **Suppositories** contg. 2.9% linezolid by wt., in a particulate form dispersed in a lipophilic carrier, were prepd. by the following procedure. **Hard fat** (**Witepsol** H-32 97.123 g) was melted and mixed with 2.877 g linezolid which had been milled to a particle size of 14 .mu.m. The resulting linezolid **hard fat** mixt. was then homogenized at high speed. The homogenized mixt. of linezolid and molten **hard fat** was filled into **suppository** molds and allowed to cool at room temp. overnight. The resulting solidified **suppositories** were removed from the molds.

L9 ANSWER 9 OF 48 USPATFULL

AB Methods are provided relating to the enhanced cytoplasmic accumulation of amphipathic weakly basic or amphipathic cationic molecules in prokaryotes and eukaryotes under conditions of high extracellular pH. Furthermore, the methods relate to the unexpected synergistic effects of high extracellular pH and disrupted cellular efflux mechanisms on the cytoplasmic accumulation of amphipathic weakly basic or amphipathic cationic molecules in prokaryotes and eukaryotes. Methods are also provided for increasing the therapeutic potency of amphipathic weakly basic or amphipathic cationic compounds, e.g. antiseptics and disinfectants by using the antiseptic or disinfectant in the presence of a multiple drug resistance inhibitor such as reserpine. Finally, methods also relate to the exploitation of the aforementioned discoveries in the screening of small molecules, and libraries thereof, for biological activity in prokaryotes and eukaryotes. Also provided is a formulation comprising an amphipathic weak base, an amphipathic cation, or both, and a multiple drug resistance inhibitor wherein the pH of the formulation is 9.0. Furthermore, the combination of these ingredients have antiseptic and/or disinfectant effects.

CAS INDEXING IS AVAILABLE FOR THIS PATENT.

L9 ANSWER 12 OF 48 USPATFULL

AB The present invention employs a scavenging approach whereby overproduced nitric oxide is bound in vivo to a suitable nitric oxide scavenger. The resulting complex renders the nitric oxide harmless, and is eventually excreted in the urine of the host. Further in accordance with the present invention, there are provided compositions and formulations useful for carrying out the above-described methods. An exemplary nitric oxide scavenger contemplated for use in the practice of the present invention is a dithiocarbamate-ferrous iron complex. This complex binds to .NO, forming a stable, water-soluble dithiocarbamate-iron-NO complex having a characteristic three-line spectrum (indicative of a mononitrosyl-Fe complex) which can readily be detected at ambient temperatures by electron paramagnetic resonance (EPR) spectroscopy. The present invention relates to methods for reducing in vivo levels of .NO as a means of treating subjects afflicted with inflammatory and/or infectious disease. Dithiocarbamate-containing nitric oxide scavengers are administered to a host in need of such treatment; these scavengers interact with in vivo produced .NO, forming a stable dithiocarbamate-metal-NO complex. The NO-containing complex is then filtered through the kidneys, concentrated in the urine, and eventually excreted by the subject, thereby reducing in vivo .NO levels.

CAS INDEXING IS AVAILABLE FOR THIS PATENT.

AB The present invention provides solid pharmaceutical compositions for improved delivery of a wide variety of pharmaceutical active ingredients contained therein or separately administered. In one embodiment, the solid pharmaceutical composition includes a solid carrier, the solid carrier including a substrate and an encapsulation coat on the substrate. The encapsulation coat can include different combinations of pharmaceutical active ingredients, hydrophilic surfactant, lipophilic surfactants and triglycerides. In another embodiment, the solid pharmaceutical composition includes a solid carrier, the solid carrier being formed of different combinations of pharmaceutical active ingredients, hydrophilic surfactants, lipophilic surfactants and triglycerides. The compositions of the present invention can be used for improved delivery of hydrophilic or hydrophobic pharmaceutical active ingredients, such as drugs, nutrionals, cosmeceuticals and diagnostic agents.

L9 ANSWER 24 OF 48 USPATFULL

AB Use of fatty acid esters as bioadhesive substances. The fatty acid esters have molecular weights below about 1000 dalton and the fatty acid component of the fatty acid ester is a saturated or unsaturated fatty acid having a total number of carbon atoms of from C.sub.8 to C.sub.22. Particularly suitable fatty acid esters for use according to the invention are fatty acid esters which are selected from the group consisting of fatty acid esters of polyhydric alcohols, fatty acid esters of hydroxycarboxylic acids, fatty acid esters of monosaccharides, fatty acid esters of glycerylphosphate derivatives, fatty acid esters of glycerylsulfate derivative, and mixtures thereof. Excellent bioadhesive properties have been observed for fatty acid esters are glyceryl monooleate, glyceryl monolinoleate or glyceryl monolinolenate.

Methods are described for administering an active or protective substance to undamaged or damaged skin or mucosa of an animal such as a human by combining the active or protective substance with a bioadhesive fatty acid ester. The mucosa may be the oral, aural, nasal, lung, gastrointestinal, vaginal, or rectal mucosa. The administration may also be to body cavities such as the oral cavity, e.g. via buccal administration.

CAS INDEXING IS AVAILABLE FOR THIS PATENT.

L9 ANSWER 38 OF 48 USPATFULL

AB The present invention relates to a composition for increasing the vascular dwell-time of a particulate therapeutic or diagnostic agent in a mammal through the adjunct administration of an effective amount of the particulate therapeutic or diagnostic agent and an effective amount of a vascular dwell-time enhancing agent. Suitable therapeutic and diagnostic agents include those whose efficacy within the body is predicated on their ability to remain within or to be carried within the vascular compartment. Accordingly this method can be readily adapted for treating several diseases and disorders, including hypoxia, hypoxemia, anemia and cancer and for imaging selected regions of a mammal by various imaging techniques, including ultrasound imaging, X-ray imaging and MRI imaging.

CAS INDEXING IS AVAILABLE FOR THIS PATENT.

AB The present invention relates to method for preventing or treating cachexia in a mammal based on the administration of a therapeutically effective amount of an anti-cachexia agent. Suitable agents include ADP-ribose-polymerase inhibitors, ADP-ribose-transferase inhibitors, NADase inhibitors, nicotinamide benzamide, theophylline, thymine and analogs thereof.

CAS INDEXING IS AVAILABLE FOR THIS PATENT.
